Dear Hiring Manager,

I am writing to express my strong interest in the AI Solutions Architect position at your organization. With over 13 years of experience in software engineering, cloud architecture, and technology leadership, including hands-on delivery of enterprise Generative AI solutions, I am confident in my ability to lead AI strategy, architecture, and engineering teams while serving as a trusted technical partner to clients.

In my current role as AI & Cloud Solutions Architect at ACG, I architect and deliver a cloud-native supply chain management platform on Azure, and have layered a natural-language virtual assistant built on Azure OpenAI and Azure AI Services onto that platform, while leading and mentoring a small AI engineering team. In parallel, as a freelance AI Solutions Architect for NewMEK, I have architected an AI-driven hiring platform using Retrieval-Augmented Generation and Agentic AI, orchestrated with LangChain and LangGraph on Azure OpenAI, spanning automated document generation, audio/video candidate profile extraction, fitment-mapping and match scoring, web-scraping-based candidate sourcing, and an agentic video-proctoring workflow that evaluates interview integrity.

Earlier, as a Cloud Specialist at LTIMindTree, I led full-stack development for Chevron's Tengiz System Completion Tool and added a natural-language understanding layer using Microsoft LUIS and Azure Cognitive Services. As Manager at Capgemini, I architected cloud services supporting AI/ML models for KYC compliance and built a compliance-query chatbot and Alexa voice skill using Botpress, Microsoft Bot Framework, and NLP techniques.

My experience spans healthcare, manufacturing, and financial services, with delivery for US and international clients through onshore-offshore engineering teams. My MBA in Marketing and Finance adds a business-oriented mindset, ensuring solutions meet technical requirements and drive business value. I am particularly proud of turning around critical projects, delivering zero-defect solutions on projects previously in the red zone.

I would welcome the opportunity to discuss how my expertise in AI architecture, Generative AI delivery, cloud engineering, and technology leadership can contribute to your organization.

Best regards,

T Krishna Kishore
