Dear Hiring Manager,

I am writing to express my interest in the Cloud Architect position at your organization. I bring over 13 years of experience designing, building, and migrating enterprise software on Azure, with a track record of delivering scalable, production-ready platforms for international clients.

At ACG, I architected and implemented a cloud-native supply chain management platform on Azure using .NET, Angular, and GraphQL, supporting a smooth migration from on-premise systems. I designed the infrastructure as code with Terraform, achieving 50% faster provisioning and 99.9% uptime, and developed an open-source EPCIS validation package that reduced syntax errors by 80% and ensured compliance with EPCIS 1.2 and 2.0.

At LTIMindTree, I led full-stack architecture and development of Chevron's Tengiz System Completion Tool using React.js and .NET Core, and designed its Azure infrastructure: Function Apps, App Services, Azure Data Factory, Azure Active Directory, and Storage Accounts. At Capgemini, I architected cloud services and web application layers for a KYC-compliant machine-learning platform and a cloud-first shareholder-insight solution for a Belgium-based financial services company addressing SRD II obligations.

I also apply AI where it adds value, including natural-language assistants on Azure OpenAI and Azure AI Services, and I lead and mentor engineers across onshore-offshore teams. My MBA in Marketing and Finance helps me tie architecture decisions to business outcomes, and I hold Microsoft certifications AZ-303, AZ-304, and AZ-204.

I would welcome the chance to discuss how I can contribute to your organization.

Best regards,

T Krishna Kishore
